Release Notes: Changes in 10.2.131.1302 for Best Western

This version is compatible with the PC-EFTPOS credit card interface

Australia

29658: Guest Ledger difference caused by running the night audit multiple times

A field has been added to the postings file with the audit system date. If an incomplete audit is detected, these records are deleted, and then reposted when night audit restarted.

RFC13304/29661: Stars on manager statistics caused by running the night audit multiple

When night audit was ran sometimes it picked up the incorrect figures therefore showing stars.

29667: Out of Order (OOO) are not fully released when deleting these from the system.

When deleting an OOO room you will get the option OK or CANCEL. By clicking CANCEL it releases the OOO room in room maintenance but stays OOO on the reports.

RFC 10353: Deposit printing error rs_paynum0

Deposit printing errors caused a Guestledger difference. An error during the payment occurred which lead to differences.

CR 123589/28862: Amyuni PDF Converter for 64bit versions

Via Tools, Additional Software, Amyuni 5.0 the Amyuni PDF Driver for 64bit versions (i.e. Office) can be installed. Please note that you probably need administrator rights!
(RFC 13369) Version 10.2.131.1302

CR0128302/34462 Allotment code change prior to first save of allotment did not update all linked databases

Allotment code change prior to first save of allotment did not update the room database with new code.

Version 10.2.131

32371: Best Western incorrect out of order (OOO) status when changing out of service (OOS) record date

The status of a room in housekeeping was incorrect when changing the end date to today's date. It has been fixed whether the return status has been selected or not.

Version 10.2.131.1302

Best Western Interface

CR0128047/33314: Allotment move does not release old inventory on Member web dates outside new range.

When an allotment was changed using the move function dates that fell outside the new range were not updated in Member web.

Best Western interface v3.4.82 (ratelevels)

The Best Western Interface has been rewritten according to the TLS12 rules.

The Best Western Interface has been rewritten according to the BWI TLS1.2 requirements, meaning encryption standards that are no longer considered safe like SSLV3 are no longer supported.

This also means some older certificates distributed by BWI in the past (using SHA1 hash) will need to be replaced by updated versions from BWI (using SHA256 hash), to support the improved encryption strength.

Best Western interface v3.4.82 (ratelevels) and 3.3.16
